

# XSA

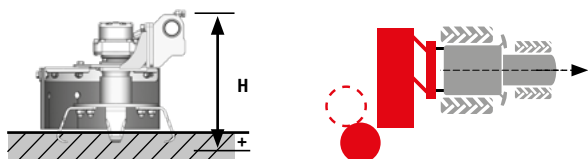

## Cultivator eradicates weed

The **XSA cultivator** supports organic agriculture as well as conventional cultures where an extended use of herbicides has caused damage or where the frequency of herbicide spraying should be reduced for other reasons. This cultivator can be mounted either to a mulcher or directly to the tractor, with the 3-point linkage PORT-X. The mechanical process cuts the roots of weeds along trees or vines and brings them to the surface. A highly sensitive hydraulic toucher protects even the youngest trees from damage.

several tools of choice

Features	XSA
Eradicates weed as deep as	4 cm [1.6"]
Working speed	1-3 km/h
Attachment	Mulcher or PORT-X
Connection	Quick coupling
Flow rate	40 l/min (10 gpm)
Rotor	Supporting turning disc
Tools	Cultivator teeth
Absorber	Hydraulic sensitive toucher mounted on X-FAST arm
Floating mechanism	via 2-FAST/PORT-X

working width cm ["]	max. outreach X: cm ["]	height H: cm	weight* kg [lb]	teeth pcs
35 [20] depending on blades	30 [12]	35+4 [14+2]	40 [90]	4

\* The weight of the machine is approximate and may vary.

Season	- spring - summer - autumn
Ideal situation	- from ca. 2 cm [0.8"] Ø with sens. toucher - grass up to 1 cm [0.4"] Ø and up to 50 cm [20"] - dry soil - few stones - slight slope up to ca. 20°
Advantages	- clean soil cultivation - mixing of humus and soil - growth spurt by mineralization of soil - disturbance of the habitats for pests (e.g. mice) - no dust
